

SmartBIM Library v3

SmartBIM Library v3 (SBL v3) has arrived and now you have the ability to store, organize and locate BIM objects, streamline design workflow and share libraries of BIM objects. SBL v3 is an add-on to the market leading building design software, Autodesk® Revit®.

With the new version v3, users will experience more powerful and efficient navigation, search and object management functionality. New features provide the ability to open multiple libraries and merge content between libraries. Custom object tags allow users to identify objects according to their preferences and upgraded search tools quickly sort content by family, type, properties or object tag.

Product Features

- Over 14,000 high quality Revit architecture and engineering family types, including manufacturer specific objects and generic objects
- Family Content Publisher plug-in generates libraries for existing Revit objects
- Improve productivity by dragging objects from SmartBIM Library Manager directly into Revit
- User-defined object tags allow users to identify objects according to their preferences
- Automatic content update service delivers new Revit families directly to the user desktop as soon as they are available
- Automatic software update service ensures users have the latest software features
- Powerful search tools allow users to easily find content by family, type, properties, or object tag
- Create new libraries and merge content for maximum object management flexibility
- Flexible navigation to Revit objects by thumbnail or by tree hierarchies including categories, families, and family types
- Open and search across multiple libraries for increased efficiency
- Customized desktop allows users to turn panes on and off and re-size, move, arrange, and drag panes outside of the application frame for maximum flexibility
- Contains Revit modeling guidelines and suggested object naming conventions
